TABLE OF CONTENTS

GENERAL INFORMATION REPORTING TELEPHONE PROBLEMS FEATURES QUICK REFERENCE LIST

PACAF DIRECTORY: [PACAF Phonebook](#)

DSN DIRECTORY: http://www.disa.mil/gs/dsn/dsn_directory.html

GENERAL INFORMATION

1. Authorization to Use the U.S. Forces System. U.S. Forces Military Personnel, DoD Civilians, and direct hire Local National personnel employed by the United States Forces Korea (USFK) or other U.S. Government Agencies only, are authorized to use the Defense Switched Network (DSN) telephone system. Invited contractors and personnel associated with, or employed by the U.S. Forces Korea are also authorized to use the DSN telephone system.

2. Defense Switched Network (DSN). DSN is the principle long-haul, non-secure, common user voice communications network in the Defense Information System Network (DISN). It provides non-secure direct dialing service throughout the world, using a combination of government-owned and leased automatic switching facilities. The primary mission of DSN is to support operations, intelligence, logistics, diplomatic and administrative communications. This system is extremely busy throughout the Pacific area. Therefore, it is imperative all DSN calls:

- a. Be limited to official business.
- b. Be placed only when the situation precludes use of the more economical mail and message systems.
- c. Be limited in duration, normally not more than 5 minutes.
- d. Be assigned a precedence level that is equal to the subject matter of the call.
- e. Be subject to communications systems management monitoring at all times.

3. Security. The DSN telephone system is NOT A SECURE SYSTEM. Classified information is NOT to be discussed over the telephone without the use of a secure telephone such as a STU-III.

4. Precedence.

- a. The National Communications System (NCS) established a voice precedence system in NCS Memorandum 1-70, dated 14 February 1970. This system was adopted throughout DoD and is called the Joint Uniform Telephone Communications Precedence System. The effectiveness of this system depends on the cooperation and understanding of all DSN users – do not abuse it.
- b. Specifically, the only authorized precedence categories are:
 - i. IMMEDIATE. The IMMEDIATE precedence is reserved for vital communications which:
 - (1). Have an immediate operational effect on tactical operations (such as, emergency weather reports and vital reports from vehicles in motion).
 - (2). Directly concern safety or rescue operations (such as, vital actions in progress reports and intelligence reports or natural disasters).
 - (3). Affect the intelligence community's operational role (such as, vital damage reports and emergency circuit restoration orders).
 - ii. PRIORITY. The PRIORITY precedence is reserved for calls which require prompt completion for national defense and security, for the successful conduct of war or for the safeguarding of life or property. Normally, PRIORITY is the highest precedence authorized for administrative matters for which speed of handling is paramount.

iii. ROUTINE. The ROUTINE precedence is used for all other DSN calls. All calls handled by the military switchboards are assumed to be ROUTINE unless the caller indicates otherwise.

5. Off-Net/Conference Calls.

- a. Off-Net Calls: Calling from a military telephone system to a commercial telephone system.
 - i. Off-netting calls to a Korean commercial number for official business must have a control number. Emergencies will be handled on a case by case basis. Off-netting calls for nonofficial business are not authorized.
 - ii. Off-netting at the distant end is at the discretion of the local commander.
- b. Conference Calls:
 - i. All official DSN users can make conference calls within country, but must have control numbers for DSN conference calls.
 - ii. Conference calls should be arranged with the chief telephone operator.

6. Use of Telephone System, Official Phones on Osan AB

- a. There are many different classes of phone service and calling areas for official phones. There are 4 areas that apply to almost all telephone system users (from least to greatest).
 - i. Osan AB only - Class-C service can only call on base numbers.
 - ii. Korea Wide - Korea wide service can call on base and Korea wide DSN numbers.
 - iii. PACAF Wide - Class-A PACAF wide service can call any number on base, Korea wide DSN and PACAF DSN.
 - iv. CONUS - CONUS service can call any on base, Korea wide DSN, PACAF wide DSN and CONUS DSN numbers including Alaska.
- b. How to make calls from official phones at Osan AB. Note: AFI 33-111 prohibits the use of official telephones for unofficial toll calls. The Air Force will not pay for unofficial toll calls placed from official telephones (31 United States Code (U.S.C.) 1348).
 - i. To make a call from a class C phone to a number on OSAN simply dial the 784 prefix followed by the desired four digit extension. To make any other calls you will need operator assistance.
 - ii. To make a call from a Korea wide phone simply dial the three digit DSN prefix and the four digit extension you desire. Calling outside of Korea requires operator assistance.
 - iii. To make a call from a PACAF wide phone dial the three digit DSN prefix followed by the desired four digit extension. To call outside of PACAF including Alaska you will need operator assistance.
 - iv. To make CONUS calls on a PACAF wide dialing access phone or lower you must obtain a Telephone Control Number and dial 0 for Osan operator assistance. Alaska dialing requires the same procedures as CONUS.
- c. Telephone Control Numbers (TCNs). TCN's are issued by each unit's Telephone Control Officer (TCO) for DSN calls outside the Pacific area, for all IMMEDIATE precedence calls and all official commercial long

distance calls. TDY personnel should contact the TCO of their sponsoring unit on Osan AB. The calling party should ask for the DSN operator number, in case the call is preempted or disconnected for any reason. If the call must be reestablished, ask for the operator by number. All calls requiring a Telephone Control Number must be logged onto an AF Form 1072 (Authorized Long Distance Call Record).

i. Personnel will need to provide the DSN operator with the following information:

- (1). Your DSN control number.
- (2). Your rank and name.
- (3). Your organization and phone number.
- (4). The phone number you are calling.
- (5). Any additional information required.

ii. To access the DSN operator dial:

- (1). "194" for ROUTINE calls.
- (2). "193" for PRIORITY calls.
- (3). "192" for IMMEDIATE calls.

7. Unofficial Phones on Osan AB.

a. There are 2 types of unofficial phones or private use phones at Osan AB.

- i. Class B1 which is personal residence phone.
- ii. Class B2 which is a private business phone.

b. Both class B1 and B2 instructions and dialing capabilities are the same.

i. The calling areas for class B phones are Korea wide DSN, Korea wide commercial, and on base areas. These phones can also accept incoming commercial and DSN calls.

ii. You may not accept collect phone calls on class-B phones. Although members pay for the telephone service, they must agree not to accept collect charges before service will be installed. Members who accept collect phone calls are subject to collection action for the charges and possible disciplinary action. The Air Force reserves the right to enter premises where such telephones are provided to inspect, repair, or remove equipment.

iii. To make calls to an off base Korean number dial 99 then the seven digit number you desire. There will be no dial tone after the 99 simply continue dialing.

iv. To make Korea wide DSN calls use the three-digit DSN prefix and the four-digit extension you desire.

c. To activate or terminate class B phone service, go to bldg. 949, room 232 and apply. For more information concerning class B telephones call 784-3215.

8. Calls from Song Tan City.

a. For “EMERGENCY 911” service from:

- i. Song Tan City dial 661-9111**
- ii. Cell Phones dial (031) 661-9111**

b. To call Osan AB from Song Tan City dial 660 for 783-XXXX and 661 for 784-XXXX numbers followed by the four digit base number (661-XXXX). You WILL NOT hear a dial tone after the 661 has been dialed.

c. To call Osan AB Telephone Operator dial 661-1110

d. Long distance calls cannot be made from Song Tan City through Osan AB. The Osan AB operator DOES NOT provide information services for Song Tan City subscribers.

9. Calling Osan AB from Other Cities.

a. In Korea. To reach OSAN AB via Korean Commercial Long Distance Service dial the following numbers 31-660-XXXX for all 783 numbers and 31-661-XXXX for all 784-XXX.

b. In U.S.A. To reach Osan AB via commercial long distance service dial:

For all 783-XXXX numbers: 011-82-31-660-XXXX

For all 784-XXXX numbers: 011-82-31-661-XXXX

For 0505-122 (SSRT) numbers: 011-82-31-617-XXXX

10. Minimize.

a. Military communications systems are engineered to provide adequate handling of normal day-to-day message traffic volumes and a limited spare capability for contingencies. When an emergency arises, the systems are not able to cope with the normal traffic volume plus the additional traffic load that the emergency creates. To insure prompt transmission of vital messages, action must be taken to confine the traffic load to the system capability. This is done by imposing MINIMIZE on the users of the system.

b. MINIMIZE means: “It is now mandatory that normal message and/or telephone traffic, i.e., traffic other than that related to the emergency, must be reduced drastically in order that vital messages connected with the situation at hand shall not be delayed.”

c. When a decision to impose MINIMIZE has been made, two things must be achieved concurrently and quickly:

- i. Users of the communications systems affected must be notified to apply stringent controls on their input into the system.

- ii. Communications stations in the areas affected must be notified to reduce volume of traffic already in the system.

- (1). When MINIMIZE has been imposed, individuals authorized to approve long distance telephone calls will review all requests for placing long distance telephone calls not yet authorized and all subsequent requests to make calls to ensure that:

- iii. Each call authorized for transmission meets the provisions of the restrictions in force.

- (1). Each call must be vital. A vital call is one, which must be made in order for the command or activity concerned to accomplish its mission under prevailing emergency conditions.

- (2). If not vital, each call must be of one of the categories which specifically exempted from the provisions of MINIMIZE.
- d. The lowest precedence which will ensure necessary speed of service has been used.
- i. Types of calls exempt from MINIMIZE, when the caller uses the phrase “MINIMIZE CONSIDERED” are:
- (1). Those containing critical intelligence.
 - (2). Those containing status information or instructions pertaining to the communication system affected by MINIMIZE.
 - (3). Those relating to aircraft movement.
 - (4). Those relating to movement of fleet units.
 - (5). Those relating to movement of troops.
 - (6). Those relating to logistical and statistical activities having a bearing on operational readiness.
 - (7). Those containing perishable weather information.
 - (8). Those relating to continuing Research and Development programs vital to the national interest.
 - (9). Those relating to serious illness, accident or death involving Department of Defense personnel (military, civilian or contract) or members of their immediate family.
- e. Commercial communications systems are not affected by imposed MINIMIZE procedures.
- f. When MINIMIZE is in effect, switchboard operators will challenge all originating calls in the following manner” “Sir/Ma’am, MINIMIZE is in effect; only vital calls will be accepted.” If the caller states, “MINIMIZE CONSIDERED,” the operator will complete the call. If the call doesn’t meet the requirements as stated in paragraph “e” above, the caller will be requested to place their call subsequent to MINIMIZE being lifted.

11. Subscriber Responsibilities.

- a. The telephone subscriber/user must not alter any telephone instrument, associated wiring or otherwise tamper with the telephone installation. In the event of unauthorized alteration or movement of Government equipment, the 51CS/SCM may suspend or terminate service without notice.
- b. Directories will not be furnished to individuals or organizations other than U.S. Government agencies and authorized contractors.
- c. Superseded telephone directories will not be sold as scrap paper, or otherwise disposed of outside the U.S. Forces area. When a new edition is distributed, the superseded directories will be destroyed by shredding, burning or tearing into small sections. For diskettes, the user can just write over the old information or reformat the diskette as necessary.

12. Telephone Abuse. Telephone instruments that have been stolen, lost, or damaged will not be replaced until a report of survey or investigation report is provided to the 51 CS.

13. Personal Long Distance Telephone Calls. There are two ways in which commercial long distance calls can be made:

- a. All major long distance services. They can be accessed with any phone by dialing the appropriate number (AT&T, 550-HOME; MCI, 550-CALL; and Korean Telephone 550-CARD). Only collect and calling card calls may be made. This service is available 24 hours a day, seven days a week.
- b. Morale Cards - Each member assigned to Osan AB can be issued a morale calling card with 60 minutes of calling time per month if desired. The procedures for making a morale call from Osan AB are:

- i. Dial 784-0002 from any military phone or 661-0002 from any commercial phone.
- ii. At the Voice Prompt Enter PIN number
- iii. Press the # Key
- iv. Dial the DSN Number including DSN Area Code
DSN Area Codes: (EX: CONUS = 312, ALASKA= 317, EUROPE= 314, PANAMA= 313, SAUDI= 318)
- v. The card is set with a one-minute delay. This means that when you call, you have 60 seconds to talk or be kept on hold until you start getting charged.
- vi. The operator on the distant end may have different guidelines on time limitations. You are subject to that base's rules.
- vii. At the beginning of the month the minutes will be recharged back to 60 minutes whether they have been used or not. And will be deactivated upon the person's DEROS.
- viii. If person extends, have the person report to the helpdesk with a copy of their orders showing the extension and their card will be updated.

14. Nuisance Calls. Subscribers receiving abusive, obscene, or offensive telephone calls are requested to immediately notify the Security Forces, using a different telephone, if possible. This allows for easier telephone tracing. Telephone maintenance/operations personnel will not trace calls unless request is received from the Security Forces.

15. Telephone Requirements. To activate, terminate or upgrade official telephone service, contact your Unit Telephone Officer (TCO) or Unit Requirements Officer (URO) and submit a requirement in PWRR. All requests will be submitted to 51 CS/SCX, Requirements Processing Section, 784-2666.

16. Reporting Directory Changes. To report changes or improvements to this telephone directory contact your unit Telephone Control Officer (TCO). If you do not know you're who your unit TCO is contact the Wing TCO at 784-3215.

17. Reporting Telephone Problems. All telephone problems should be reported by dialing 784-2666, then selecting the Telephone Trouble Desk option in the call tree. Be prepared to give the following information and choose which examples best describe your problem.

- a. I would like to report trouble on phone number 783-XXXX/784-XXXX.
- b. My name is _____.
- c. I am located in building _____, room _____.
- d. The trouble is (use one of the following examples):
 - i. No dial tone.
 - ii. Static on line.
 - iii. Circuit drops off before called party answers.
 - iv. Keep getting wrong number.
 - v. Cannot break dial tone.
 - vi. Other

18. Reporting Bomb Threats. Subscribers receiving bomb threat calls are required to immediately use the AF Form 440 (Bomb Threat Aid) to gather as much information from the caller as possible. Then, notify the Security Forces immediately, using a different telephone, if possible (to make call tracing easier).

WARNING:

INFORMATION ON ALL OUTGOING LONG DISTANCE CALLS WILL BE RECORDED BY THE BASE TELEPHONE SYSTEM.

GUIDELINES:

The telephone system will keep a record of the following information on each outgoing long distance call: The number used to place the call, the number that was dialed, the date, the time, and the length of the call. Telephone control officers are required to validate and verify these calls as being official or unofficial using available information and the AF Form 1072. These records become legal documents when investigating placement of unofficial calls.

It is the duty of all telephone users on Osan Air Base to immediately report any abuse of the base telephone system to their commander.

USE OF THE MILITARY SYSTEM

FEATURES:

1. CALL FORWARD:

To activate - Lift handset, dial *72, listen for dial tone, dial number where calls are to be forwarded, hang up.

To cancel - Lift handset, dial *73, listen for dial tone, hang up.

2. CALL PICKUP:

To activate - Lift handset, dial 111 or *77, answer call.

3. PERMANENT HOLD:

To activate - Depress hook switch, flash button, or link button listen for special dial tone, dial *80, hang up.

(Your call is now on hold: if you hang up, your phone rings intermittently to remind you; if you do not hang up, there is no ring)

To deactivate - Lift handset.

4. RING AGAIN:

To activate - Depress hook switch, flash button, or link button, listen for special tone, dial *78, hear regular dial tone, hang up.

To respond - listen for short bursts of ringing, lift handset (number is automatically dialed.)

To deactivate - Lift handset, dial *78, listen for dial tone, hang up.

5. LAST NUMBER REDIAL

To activate - Depress ## and it will dial the last number dialed on that particular phone.

6. TO TRANSFER/CONFERENCE A CALL:

- a. Inform the caller that you are transferring/conferencing the call.
- b. Without hanging up, depress the hook switch, flash button, or *85, or link button. The user will hear the three quick beeps, then the dial tone.
- c. Dial the number you wish to TRANSFER/CONFERENCE to. Ringing will be heard until the third party answers. Once the third party answers, the feature user phone is connected to the third party and the original (incoming call) party cannot hear the conversation.
- d. At this point the feature user can CONSULT, CONFER, or go to the next step for TRANSFER.

e. Once the third party is aware that TRANSFER is about to occur, the user hangs up. The call is then transferred and the feature user's telephone is free to receive or place other calls.

7. COMMERCIAL LOCAL ACCESS: Dial 99

8. OPERATOR ASSISTANCE: Dial 0

9. PERMANENT HOLD

a. The "Permanent Hold" feature allows users to hold a call, without operator assistance, so that one may leave the telephone to reach desired information. While on HOLD, the hand piece is hung up, thereby upholding COMSEC practices by avoiding the broadcasting of background sounds and conversations. The telephone will ring every 60 seconds (with a short burst of ringing) to remind the user that a party is on HOLD. If the hand piece is left off after the call is placed on HOLD, no ring-reminder is given and the user must use hook switch flash to retrieve the party on HOLD. HOLD is only used when a call is in progress. HOLD cannot be activated during a conference. The two parties can put each other on HOLD simultaneously.

b. TO ACTIVATE PERMANENT HOLD:

- i. Inform the caller that you are placing the call on HOLD.
- ii. Without hanging up, flash the hook switch. The user will hear the confirmation tone (5 quick beeps) then dial tone.
- iii. Dial the PERMANENT HOLD feature Access Code: Depress *80.
- iv. Replace the hand piece. The call is placed on HOLD. A reminder ring will occur every 60 seconds until the caller is retrieved (if the handset was not replaced, no reminder will be given).

c. **TO RETRIEVE A PARTY ON HOLD.** Lift the hand piece (or quickly depress the hook switch, flash button, or link button).

10. TRANSFER

The "Transfer" feature allows incoming calls to be transferred to other base extensions from the extension called (without operator assistance). This feature allows a person on a 2-party call to hold the existing call, then (1) consult privately with a third party (2) join the three parties together to confer or (3) TRANSFER the original caller to the third party. When the TRANSFER is completed the feature users' telephone is free to make or receive calls. The feature user should ensure the third party answers before transferring the incoming call. If the third party is busy, (busy tone heard). The feature user flashes to return to the original caller. When receiving a call by error or when the proper number to transfer to is not known, transfer the caller to the Switchboard Operator 0. DSN calls can be connected to another outside number using this feature.

11. CONFERENCE

a. The CONFERENCE feature allows you to hold an established call then add up to six different parties on the line. During a two-party conversation, either member can add a third party or more parties into the conversation. Once all parties have answered, the feature user can rejoin the conference, if the called party does not answer or is busy; the feature user depresses the hook switch, flash button, or link button to be reconnected to the original networks. During the conference if the feature user hangs up the remaining parties will remain connected only if within the base system (i.e., DSN and Commercial parties are dropped).

b. TO CREATE A CONFERENCE:

- i. Inform the caller you are placing the call on hold to arrange a CONFERENCE.
- ii. Without hanging up, depress the switch-hook, flash button, or link button (or the conference six-button on multi-line phones). The user will hear three quick beeps, then dial tone.
- iii. Dial the number of the third party to arrange the conference, ringing will be heard until the called party answers. When the third party answers, the original party is not aware of the conversation.

- iv. Once the original party is aware that the conference is about to be engaged, without hanging up, depress the hook switch, flash button, or link button. All three parties are now connected. The conference will be disengaged once all parties are hung up.
- v. To add a fourth and subsequent parties, repeat steps (b), (c) and (d) above.

12. RING AGAIN

- a. The “Ring Again” feature allows a caller who encounters a busy number to request the central computer to monitor the busy circuit. The computer will alert the feature user when the desired telephone is no longer busy, then it automatically completes the connection. When the RING AGAIN requested telephone becomes free, the central computer causes the feature user’s telephone to ring in a succession of thirteen quick, short ringing bursts. The feature user must answer during this fast ringing or the RING AGAIN request will automatically be canceled. When the fast ringing is answered, the RING AGAIN requested telephone begins to ring immediately. With a RING AGAIN request made, the feature user is free to make or receive other calls while waiting. When multiple parties request RING AGAIN requests for a common (busy) telephone, requests are serviced on a first call - first serve basis. RING AGAIN requests cannot be answered by others in your CALL PICKUP GROUP.
- b. RING AGAIN ON A BUSY NUMBER:
 - i. While listening to the busy tone, without hanging up, depress the hook switch, flash button, or link button. The user will hear
 - ii. Three quick beeps, then dial tone.
 - iii. Dial: *78 and hang up. While waiting to be notified (or recalled), the line is free to make or receive other calls.
- c. WHEN THE RING AGAIN BECOMES FREE:
Thirteen short, quick bursts of ringing will be heard at the feature user’s telephone. Once the feature user’s telephone is answered, the requested telephone will automatically begin to ring.

NOTE: You cannot use the RING AGAIN feature on a busy DSN number.

13. CALL FORWARDING

- a. The “Call Forwarding” feature is used to automatically (and silently) redirect calls to another base extension. This feature allows users to have incoming calls follow them to other locations or to be dispatched to other persons or offices. Calls can be FORWARDED to most extensions including Base Operator, but feature users should always coordinate first with the party chosen to receive FORWARDED calls. User’s telephone can make outgoing calls but will not receive incoming calls. A feature user in place by a telephone using CALL FORWARDING cannot intercept the forwarded calls without disengaging this feature. No special audible signal will be given to indicate that a telephone is using CALL FORWARDING. CALL FORWARDING cannot be activated or deactivated by members of an active conference. A fast busy tone (denial tone) will indicate when CALL FORWARDING or the desired FORWARD to number is not authorized.
- b. TO REDIRECT INCOMING CALLS TO ANOTHER EXTENSION:
 - i. Coordinate with the FORWARDED party that calls will be FORWARDED.
 - ii. Depress hook switch, flash button, or link button
 - iii. Listen for dial tone, which indicates ready. A fast busy will indicate feature denial.
 - iv. Dial pound sign *72 + number to be FORWARDED to.
 - v. At this time, the original extension can make outgoing calls but will not receive or indicate incoming calls. All calls dialed to the feature user’s telephone will ring at the assigned (FORWARDED-To) extension only.
- c. TO CANCEL A CALL FORWARDING ASSIGNMENT:
 - i. Inform the FORWARDED-to party that CALL FORWARDING is being disengaged.
 - ii. Listen for dial tone.

iii. Dial pound sign *73. At this time dial tone is received and incoming calls will be received to the feature user's extension.

14. CALL PICKUP

The "Call Pickup" feature allows a feature user to answer incoming calls to other unattended telephones within a mutual CALL PICKUP GROUP. Incoming calls are PICKED UP by lifting the hand piece and dial 111. The incoming call is automatically connected. Feature users engaged on a call when another call comes in (for an unattended telephone within a common PICKUP GROUP), cannot place the original party on hold to PICKUP the new incoming call. Busy PICKUP parties must terminate or transfer the original before the new incoming call be PICKED UP. An extension within a PICKUP GROUP cannot PICKUP calls to extensions in other PICKUP GROUPS. When answering a call for a PICKUP GROUP, the call should be answered by identifying the name of the work center covered by the PICKUP GROUP. A current work center reference guide of all CALL PICKUP GROUP capabilities should be made available to all GROUP members. PICKUP GROUP capabilities may be identified through records kept by Telephone Communications.

NOTE: Ring Again cannot be PICKED UP by a PICKUP GROUP.

15. CALL WAITING

The "Call Waiting" feature discreetly alerts a user on an existing call when another incoming call is waiting to be answered. This feature allows the user to accept a second call without terminating the original call. The feature user may hold the first party while answering the second party. If one of these two parties hangs up, the feature user will be automatically connected to the other party. CALL WAITING allows the feature user to decide and deal with the more important or expensive call first. CALL WAITING PARTIES can be members of conferences, but cannot be conference originators. Extensions with CALL WAITING cannot have the HUNT feature.

HOW CALL WAITING WORKS:

During conversations, two quick beeps are heard indicating a second incoming call on CALL WAITING. The feature user depresses the hook switch, flash button, or link button to answer the second call and automatically places the first party on hold. Subsequent hook switch, flash button, or link button depressing allows the feature user to alternate between the two calls. Through alternating between calls, a decision can be made as to which call should be handled first.
